---

I am just starting out with widgets in Wave 4.01 and would be grateful if someone who has experience with this could help with the following problem.

I have tried the example on p 2-4 of the "guide to widget toolbox and wave widgets". When I enter

```
top=Wwinit('ww_ex1','examples',layout)
```

I get

```
shell=Wtlnit(appname,appclass,'-bg',bg,'-fg',fg,'-fn',fn,'-g ',geom, $  
^
```

% Only 7 subscripts allowed.

At: /usr/pkg/pvi/wave/lib/std/motif/wwinit.pro, Line 68

which appears to be a compiler error.

I'm sure the problem will be something obvious, but I don't know what it is.

Thanks for your help.

Roger Fulton.
