Hi everybody,

I am student of mechanical engineering in Graz, Austria. As a project I want to create a 3D model of the human foot. Therefore I would need a 3D mesh of the concerning bones. What I have is the permission to use both, bones and CT of the university.

Who can help me solving the problem to create the surface of bones using MR or CT pictures?

Who knows software that is helpfully in drawing the boundaries of bones using pictures.

Yours Erik
