One of our users has a Macintosh Quadra 800 running System 7.1, Macx version 1.2. This user uses Macx in 8 bit mode to start up an xterm session on a Sun workstation. They use the open look window manager. Our problem is that if we run an Idl session and then exit from Idl and start up a new session the Quadra hangs every time. We are pretty sure that its a problem with color tables but we don't know how to solve it. Any suggestions would be greatly appreciated.
