Hi again,

I wrote an object widget tool to interactively select RGB color triples. Selections can be made from integral values [0, 255], normalized floating values [0.0, 1.0], slider widgets, or hexadecimal value. It's based on a C code version I wrote with the XForms library (if anyone is interested in that, let me know), with a little IDL help from DWF's pickcolor.pro.

You can take a look at it on

http://cspar.uah.edu/~mallozzir/software/idl/img/dialog_color.jpg

and get the code from

http://gammaray.msfc.nasa.gov/~mallozzi/home/software/idl/src/dialog_color.pro

Regards,

-bob
