IMDISP is an image display program for IDL.

Previously, when the caller passed a POSITION keyword without passing a MARGIN keyword, the default margin was 0.1 normal units. This caused problems if the POSITION vector covered a small area (e.g. [0.1, 0.1, 0.4, 0.4]).

Now when the caller passes a POSITION keyword without passing a MARGIN keyword, the default margin is 0 normal units.

For the updated source code, please visit the IMDISP web space at
<http://cimss.ssec.wisc.edu/~gumley/imdisp.html>

Cheers,
Liam.
