Subject: RGB values for visible spectrum?

Does anyone have a set of RGB values matched to the colours of the visible spectrum? It doesn't have to be tied to a well-defined colour space, although that would be nice. I want to construct a 'photon energy' object that can convert between different units (cm-1, eV, nm, kJ/mol) and give the user an RGB triple that is a reasonably close match to the specified wavelength.

All ideas gratefully received.

Struan
