
Subject: CALL_EXTERNAL with Windows DLL

I know it is hard to find answers for CALL_EXTERNAL questions since the literature on this subject is rare and RSI is not very helpful with their manuals either.

But maybe someone knows...

How do I compile a DLL for Windows with the Lahey Fortran compiler LF95 that can be used with IDL. My questions has two parts: What are the compile options for LF95 and how does the call external statement look like? I worked all this out on for the SUN compiler but for Windows I have no clue....

Help would be greatly appreciated.
Haje
