
Subject: Suggestions for 'Property' help

In light of the recent discussion(s) regarding handle graphics and uicontrol stuff I started to think about an on-line help utility for the various properties which can be set for particular objects. I propose a help utility a la many Unix commands, but in a matlab form which would look something like the following:

```
>> set(h, 'help', 'Property' )
```

This could be a valuable source for on-line help, as well as provide the information as to whether or not the property and object are even compatible. Plus, I would not have to start an investigation into who has the manual!

A Couple of Pennies,
