
Subject: Breaklines in interpolation

Hi,

I'm working on a elevation model with terraces.

Does somebody know if it is possible to use "breaklines" in some interpolation methods (like in some GIS programs like ArcInfo).

On the one hand I want to limit the interpolation within a certain island (which is easy when you can "mask" the area).

On the other hand I would like to force the interpolation at certain points/lines to certain altitudes.

Any suggestions?

Gerhard
