
Subject: How do you get rid of for-loops with arrays

I have tried to understand how to use the arrays in IDL but
there is still tons of techniques that I don't know...

Is it possible to do this without for-loops?

```
a = [[1,2,3],[4,5,6]]  
b = [2,2,3]
```

```
for i=0,1 do a[* ,i] = a[* ,i] * b
```

--

Thanks,

Karri
