
Subject: Widget Buttons - Radio and Checkbox control

I'm currently writing some code in IDL 5.3 that utilises two groups of widget buttons, 2 Check boxes and 4 Radio Buttons. I would like to be able to set both check boxes and one of the radio buttons to be 'on' when the program starts, and possibly to reset them at a later stage of program execution after user intervention.

Can anybody help me with this? I can't find any relevant information in the IDL help.

Thanks,

Oliver
