Hello. I am switching from PV-Wave over to the current release of IDL.

Having

been a wave coder since version 0.6, I can appreciate the development environment of IDL.

However. Wave has a nice set of routines for IIR filter design and applications. These

are very important for our work because IIR filters can be causal, differing from

FFT and FIR techniques.

Does anyone know of IIR stuff for IDL? I do not want to write from scratch as

suggested in the IDL documentation.

Searching the libraries on the web produces nothing.

Thanks,

Ed May
