Hey all, I'm having a problem and I was wondering if anyone could provide any insight. I have the following script which I want to run from IDL, using spawn I assume (right now I'm using spawn, '[commandline & parameters]', since the /NO_SHELL keyword, which lets you pass in a string array with the arguments, apparently doesn't work for scripts, only programs):

```
#!/bin/csh
```

```
rm /home/scratch/im_size
program1 $1 12 /home/scratch/ap.vff 3
compress /home/scratch/ap.vff
program2 /home/scratch/ap.vff.Z /home/scratch/g_20.vff 20
script /home/scratch/g_20.vff $2
```

However, when I run it, some things execute and some don't. program1 doesn't appear to run, but script (which is a script which calls idl) does. program2 *might* run, but as it depends on the output of program1, it doesn't get anywhere. Is there anything special I need to do to execute the script properly? Do I need to provide more information?

Thanks,
STEVE!(steve@moffitt.usf.edu)(chetelat@grad.csee.usf.edu)
