Hi,

we have a lot of problems reading netCDF files with idl on AIX.
If I use one of the following commands in an idl session I will get a
coredump
reading a netcdf File by AIX.

I have no problems with Win NT and Linux IDL.

Who else is using netCDF with AIX-Platform and IDL? Am I alone?

One of these commads gives a core dump during ncd_f_error

This routine is quite simple: open, close

- 1)
widget_control,default_font='-adobe-helvetica-medium-r-norma l--12-*-*-*60-*-*'
- 2) device,decomposed=0
- 3) window,0,xsize=100,ysize=100,color=256

PRO ncd_f_error

```
widget_control,default_font='-adobe-helvetica-medium-r-norma l--12-*-*-*60-*-*'  
device,decomposed=0  
window,0,xsize=100,ysize=100,color=256  
  FOR ii=0,2000 DO BEGIN  
    PRINT,ii  
    file_name = 'ncdf_error.nc'  
    cdfid = NCDF_OPEN(file_name,/NOWRITE) ; OPEN the file  
    NCDF_CLOSE,cdfid  
  ENDFOR  
END
```
