
Subject: IDLwidgets routine PICKFILE: multiple filters under VMS?

Hi,

Ages ago, PICKFILE supported the use of multiple filters under VMS;
when the routine was rewritten to support Unix, this capability went away. The
latest version (3.5.0) suggests a syntax like
; F = PICKFILE(/READ, FILTER = '*.pro *.dat')
to pick up all *.pro and *.dat files, but this just doesn't work under VMS.
Single-filter usage works just fine.

Does anyone have any ideas or a rewritten routine to get around this?

Thanks,
