Subject: Math Libraries in PVWAVE
Posted by Erik John Bock on Wed, 31 May 2000 07:00:00 GMT

When trying to use the math library functions (like INTFCN) in PVWave
Advantage 6.1 for WinNT I always get errors like:

ON_ERROR: Variable is undefined: ON_ERROR_ACTION (CMAST$GEN_COM)

What am I doing stupid? Do I need to precompile these additional .PRO
files, and if so, am I missing something obvious? Any help would be
welcome.

You gotta initialize 'em before you use 'em. Do:

@math_startup
@stat_startup

to initialize the math/stats routines.
