I've been searching through the IDL documentation trying to find out how to copy a selected region to the system clipboard. I can find out how to do using object graphics but am unable to find out how to do it using direct graphics. I know that if you press Ctrl-C (in windows) that you can send the current window to the clipboard but I am looking to be able to copy only a selected region. I hope I am just missing it! Thanks for any help.
