Subject: File modification date

Is there a way using IDL 5.3 and Windows95 to obtain the modification date of
a file? After checking the IDL documentation, I didn't see it mentioned.

The situation is that I'm reading data from a binary file and then storing it
in a NetCDF file. For traceability, in the NetCDF global attributes I'm
including the binary filename and I'd like to include the binary file
modification date.

Thanks in advance for your help.
