Hi all,

I would like to know if anyone from the group is running IDL 5.3 under Windows 2000 and if there has been any problems. My information is that RSI does not officially support it since they have not recompiled it yet under Win2000, but that several customers are currently using it. A pretty sticky point if you are contemplating purchase of many licenses and are probably going to update to W2000 in the future.

Thanks in advance.

Bill B.

A quick followup from RSI for those interested:

"Our Quality Assurance Group has just completed their testing and IDL 5.3.1 for Windows is now officially supported on Windows2000."
