Hi,

I am sure I have seen this ? before, but I can not find it after searching the resources. I apologize for repeating the ? again, but how do we multiply a 2D array by a vector?

In more detail, if I have A=FLTARR(5, 3) and B=FLTARR(3), then how do I multiply each of 5 columns in A by B without a loop?

Thank you,

Pavel

Thanks Marc. Before I wrote the question, I read Help on REBIN but it did not ring a bell. It is sad to realize how dumb you can be on an afternoon before a day you plan to take off :(I am glad today I haven't written much code that day.

Cheers,

Pavel
