Subject: include file? Posted by Stu on Thu, 29 Jun 2000 07:00:00 GMT View Forum Message <> Reply to Message

Hi,

I have several different routines that all set up the same or slightly different constants etc at the beginning, is it possible to have all the constants in one file, and have all my functions/procedures reference this file when they start? It would make for easier maintainence this way. How would it be done? I can't see a normal function or procedure doing the job as you would have to ask for each constant explicitly, which is a bit of a pain.

cheers, Stu
