I would like to use IDL with ENVI as a visualization server. It means that I would like to ask IDL to visualize an image under the ENVI environment from a C application.

We tried IDLRPC but, as soon as we have sent the 'ENVI' command (to IDLRPC), we cannot send other command. I think it is due to the ENVI mainloop.

We also tried with CALLABLE_IDL but we have nearly the same problem.

Does someone knows how to launch an IDL command (IDL currently running ENVI) from a C application without loosing the control of the C application ?

Thanks.
