
Subject: problems with MODAL widgets and non-modal sub-widgets

Hi,

I was just wondering if anyone has found a solution to the problem of calling non-modal sub-widgets from modal widgets in IDL5.3. I have read the (very informative) page on Dave Fannings' web site which includes a posting from Bill Thompson on the subject but the solutions suggested seem to require a lot of re-writing. Does anyone know if RSI has fixed this problem yet?

thanks,

Anne Martel

For a while we were able to get around the problem by using a hacked version of xmanager.pro suggested to us by RSI support. However, this solution broke with IDL/v5.3. We ended up having to bite the bullet and rewrite the software to avoid using /MODAL. Pity, especially since the changes involved coordination between programmers on two sides of the Atlantic.

William Thompson

Oh, don't even get us started. :-(

Cheers,

David
