Wow, you guys are getting a bit philosophical here. This is my first posting and OK you definitely have my respect, but could you possibly lower yourself to helping with questions like 'Why I don't get multiple element output from my list widget?' please?

Here is my widget_definition:

```
Widget_list(tlb,sensitive=1,/multiple,ysize=26,event_pro='an ypro')
```

So I get my array of filenames into my list widget and then try to select four files by left click + shift left click below (or just dragging the cursor) so it highlights the desired four file names and the event.index only gives the index of the last filename.

Is there something obvious I'm doing/not doing or some secret IDL kung fu I could perform to get it to work?

Thanks very much,

Stu.

Dear Stuart,

we are using a compound widget to select from a list.

You can do a selection by typing something in the text field.

Example:

```
PRO test_event,ev
  WIDGET_CONTROL,ev.id,get_uval=cmd
  WIDGET_CONTROL,ev.top,get_uvalue=b
  CASE cmd OF
    'done':BEGIN
      WIDGET_CONTROL,b,get_value=v
      IF v.list_selected[0] NE -1 THEN PRINT,v.list[v.list_selected]
      WIDGET_CONTROL,ev.top,/dest
    END
    'FF':BEGIN
      WIDGET_CONTROL,ev.id,get_value=v
      IF v.button_pressed EQ 1 THEN BEGIN
        replace_tag,v,'list_selected','list_selected',INDGEN(2)
        WIDGET_CONTROL,ev.id,set_value=v
      ENDIF
    END
    ELSE:
  ENDCASE
END
PRO test
  a=WIDGET_BASE(row=2,/frame)

  value={label:['[0,1]',list:STRTRIM(SINDGEN(40),2),text:','but ton:'PRESELECTION',$
    list_selected:-1,button_pressed:0,description:'TEST']}
  b=cw_list(a,value=value,uvalue='FF',frame=2, XOFFSET=9,$
    YOFFSET=15 ,SCR_XSIZE=140 ,SCR_YSIZE=200,$
```

```
/text_all_events, text_xsize=19,/text_editable, $  
/list_multiple,list_ysize=10,list_xsize=20,$  
label_xsize=100,$  
button_ysize=20 )  
d=WIDGET_BUTTON(a,val='done',uval='done')  
WIDGET_CONTROL,/realize,a,set_uvalue=b  
XMANAGER,'test',a  
END
```

I think this is the third time in a row, Reimar,
that I've tried to follow one of your links and
end up with a "Server not found" message. Is this
a public-access server you are pointing us to? :-)

Cheers,

David

Dear David,

This server is our public-access server. It's the official
server of the "Forschungszentrum Jülich".

On Tuesday we had some network problems in Cologne so it was
not reachable from outside.

May be somewhere between us are network problems I don't know.

I will ask some of our network administrators.

regards

Reimar

Some of our experts told me that since 3 or 4 hours the network connection to America is down.

Please try again later.

Reimar
p.s. I don't know why I could post.

It worked nicely - Cheers
Stu.
