Subject: shorten a vector
Posted by noymer on Fri, 08 Sep 2000 01:49:09 GMT

Dear c.l.i-p,

What's the easiest way to shorten an array by n units
by chopping off the first n elements of the array.

E.G: I want to make [4 6 7 20 15]

Into [6 7 20 15]. Here n=1.

The ways I have figured out to do this are pretty
messy - there must be something simple. (Well, there
is is S-plus :-).

TIA,
  Andrew
