Hello all this may sound like a dumb question but this has been buggin me. My problem is that when 've processed some thousand rows of data thats read into an array and wish to ouput it to a new file what happens is that the row doesn't fit on a line but rather goes over to the next line but i tried just printing out the values as is instead of the array and the exact same values fit.

ANY IDEAS WHY THIS IS HAPPENING??

```
PRO prnt
GET_LUN,unit
OPENW,unit,'prnt.dat'
array=STRARR(13)
array[0]='45479'
array[1]='56.64'
array[2]='-74.63'
array[3]='246.85'
array[4]='262.13'
array[5]='269.13'
array[6]='269.49'
array[7]='252.89'
array[8]='261.92'
array[9]='232.29'
array[10]='232.29'
array[11]='1.62'
array[12]='35.42'
printf,unit,array
```

```
CLOSE,unit
```

```
OPENW,unit,'prnt2.dat'
printf,unit,'45479 56.64 -74.63 0 246.85 262.13 269.49 252.89 261.92
232.29 232.
29 1.62 35.42'
CLOSE,unit
FREE_LUN,unit
end
```
