
Subject: formatted text entry fields

hello,

I am trying to find some routines for formatted entry fields (these will most likely be compound widgets). I would like to be able to specify a type (integer, float, string, etc) in addition to the number of input character to accept.

(yes I am aware of `cw_field`, but it doesn't allow limiting input to x number of character, plus its got the label. But in worst case this could be canablized)

thanks for your help,

-stephen

There is a bug in the `cw_zoom` widget. The current window is saved and the draw window is set `_after_` an erase command. Saving and setting the windows should be done before the erase.
