
Subject: Unicodes in IDL.

An easy one for IDL gurus,

I have an IDL text object with formatting enabled, ie: yTitle =
Obj_New('IDLgrText', ytitle, Formatting_Enabled=1).

I am using the !Z() embedded formatting command to specify the special
symbol for (deg C) for example, and I don't know the code.

As far as know Unicode is a 16-bit superset of Ascii codes. Where can I
find a list of Unicodes for Scientific symbols and especially for the
degC .

Regards,
GeorgeC
