```

Did you mean:

window, win, 100, 100

Or, will this get you started?

plots, [0,100,100,0], [0,0,100,100], /device

The device keyword forces the operation to occur in pixel space.
Since your coordinate axes don't seem to matter to you, this is
probably the best option. Note you can get the display size in pixels
from the !D system variable, in case you need to scale accordingly.

```

This works in any size window:

Plot, x, y, Position=Aspect(1.0)

You can find ASPECT.PRO on my web page:

<http://www.dfanning.com/programs/aspect.pro>

Cheers,

David

Hello,
<p>You might try the ISOTROPIC keyword to plot.
<p>From the online help.
<blockquote TYPE=CITE>
<pre>ISOTROPIC
```

Set this keyword to force the scaling of the X and Y axes to be equal.

Note - The X and Y axes will be scaled isotropically and then fit within</pre></blockquote>

<blockquote TYPE=CITE>
<pre>the rectangle defined by the POSITION keyword; one of the axes may be shortened.</pre></blockquote>

<blockquote TYPE=CITE>
<pre>See POSITION for more information.</pre></blockquote>

<p>
Note that the window size is not adjusted, rather the axes are.

<p>Ben

<p>Peter Brooker wrote:

<blockquote TYPE=CITE>Assume that I have the following data

x=[0,1,1,0]

y=[0,0,1,1]

<p>this defines a square.

<p>plot,x,y

<p>results in a "non-square" plot.

<p>Is there an easy way to tell IDL to adjust the window size so that the

square will plot as a square on my screen?

<p>thanks</blockquote>
