Folks,

I was just looking at the what's new for 5.4. Oh, my, some tasty morsels in there, some of which I've been longing for for aeons. I can't say enough how much adding break and continue, and switch also, will do to clean up my programming. The end to 10 level deep nested if's! The tyranny of excessive indentation, cast off at last!

I hope they made the parser smart though -- I'm sure there are some variables called "break" in routines out there.

The new call\_external sans glue code looks neat too, with make\_dll.

Relaxed structure concatenation!?!? What? But no longer will we old newgroup hands be able to offer our profound and deep insight into IDL's interior workings when the next "I can't concatenate these seemingly identical structures" question comes along. This is heresy. It's also a much bigger deal than you think. Each struct's integrity is preserved, and they are permitted to be concatenated if they have the same layout.

IDL> wha=where(a eq 0,COMPLEMENT=others)

That's just frightening. Do you know how many times I've done

```
others=where(indgen(n_elements(a)) ne wh[ind])
```

or some such, just to get the data which \*weren't\* selected?

And how about array\_equal()?... my goodness am I seeing stars. I think we were complaining about the lack of a test that didn't return all the elements and stopped as soon as it knows the answer several years back.

Printing with C-style formats? Say bye-bye  
FORMAT=(A,T25,A,T36,A,T50,A)'

NBINS keyword to histogram? More gravy please.

All in all 5.3->5.4 is shaping up to be about the biggest upgrade since 5.0 brought us willy-nilly into the world of objects.

Thoughts, reactions, uninformed rantings?

JD

P.S. Since I've not actually \*used\* 5.4 yet, please test any of my wild conjectures which catches your attention.

One thing that would have been nice for them to change is their FTP server. How about mirroring this rather popular package somewhere(s)? It's been almost a week since the release and I still get around 1k/sec on a T3+ connection. Yes, I guess I could order the CD... :P
