Here's an idea. Look for one of those specials RSI
holds occasionally where they update a PV-WAVE license
to an IDL license for the price of a PV-WAVE maintenance
contract. Life is a *whole* lot easier with IDL widgets. :-)

Cheers,

David

Everyone,

Lets say I had a widget to select and load a file, and another widget (a
label) that displayed the name of the file that was loaded...

If I then loaded another file, how would I get the label to "update" (i.e.
remove and recreate the label widget) ??

I have another similar problem - a widget that displays a datafile that does
not update to reflect new values when the datafile has been changed...

Any ideas??

Best wishes,

Andy

Yup, we did that, and I must concurr! Wave widgets seemed considerably
more baroque than the IDL ones from my limited experience with both.

Pete.
