
Subject: IDL and PCI: problems

Hi

I'm using IDL 5.3 and PCI (PCIWorks, Version 7.0, Release date: May 2000) on a Windows NT (SP 6) workstation. IDL uses a local license file,

while PCI gets its licence file from a server.

Problem: Since I installed IDL, PCI slowed down, e.g. if I start PCIWorks or Xspace etc., I have to wait for about a minute for the pop-up

of the Toolbar. Opening a task in Xspace is no problem but the command RUN or STATUS is slow again...

Any suggestions? Can someone help?

Thank you,

Dave Oesch
