Subject: Dialog_pickfile
Posted by Thomas Launey on Fri, 03 Nov 2000 04:20:05 GMT

Hello,

I have a problem with filelist=Dialog_pickfile(/read,/multiple_files)
If I selected one file located at the root of a hard disk
(say: "c:\test1.txt") then
> print, filelist
c:\test1.txt

BUT if I select more than one file at the root of the disk then
> print, filelist
c:\\test1.txt c:\\test2.txt c:\\test3.txt

that is that "\\" ??? It only happens when the file are located at the
root of a disk (multiple files from a sub-directory is OK).

Of course: openR, lun, filelist[0], /get_lun does not work since
"c:\\test1.txt" is not a valid filename under Win32

Am I doing something wrong or is it a problem (fixed in IDL 5.4 ?)?
Cheers
Thomas Launey

With IDL 5.2 and windows 98, it's OK :

DL Version 5.2 (Win32 x86). Research Systems, Inc.

For basic information, enter "IDLInfo" at the IDL> prompt.

IDL> filelist=Dialog_pickfile(/read,/multiple_files)
IDL> print, filelist
C:\JeanLuc\Drone carte DSP.vsd
