Hi,
can someone tell me a way to pass information (like images) between
different event handler modules avoiding common blocks?

thank you

Gernot Reishofer

You have to use a pointer of a named structure.
Then you can use our function `get_pointer` to find this pointer by it's
name.

```
a=PTR_NEW(CREATE_STRUCT(name='dd','name','a','value',24))  
b=get_pointer('dd')
```
