
Subject: IDL and PVWAVE are no longer the same thing.

PV-WAVE used to license IDL from RSI (creators of IDL) and repackage it as PV-WAVE. The licensing agreement was terminated last year when PV purchased a copy of the IDL source. This means PV WAVE does not have and will not get any of the newer features of IDL. I chose to stay with RSI who developed the technology, but potential buyers should contact both companies to see if direction they are heading in corresponds with your needs as compatibility between IDL and WAVE is no longer guaranteed.
