Todd, let me know. I have gift certificates for
my book. :-)

Cheers,

David

In your .emacs file:

(custom-set-variables
 '(font-lock-maximum-size (* 512 1024)))

Where you can set any random maximum you want by changing that 512 (the
defult is 256, i.e. 256*1024 = 256K).

Works on my xemacs.

When can I expect my book? ;>

Todd

Uh, I thought you were going to give them to those
guys who wrote those huge program files. :-)

Cheers,

David

P.S. Let's just say that even if you don't like objects,
you *have* to like a nice object-oriented programming
style.

In .emacs, use this:

    (setq font-lock-maximum-size 1000000)

The number is a buffer size in bytes (not lines). You can also use

    (setq font-lock-maximum-size nil)

to remove any size limit.
