
Subject: IDL and Unix group permission problem...

I'm trying to write a PNG file through IDL command WRITE_PNG.

The directory where I want to write does not belong to me but to another user of the same group and the group permission is set to rwx (as well as the world permission as a try).

IDL refuses to write the file and gives me "WRITE_PNG: Error opening file..."

I can create files there without problems from outside IDL.

Background: SGI, IRIX 6.5.8, IDLDE 5.4 (IRIX mipseb)
