Sorry for the twenty questions today but how does one go about labeling the minor tick marks on a log axis (or a linear one for that matter)? Does such a simple thing require use of XYOUTS? I've been futzing about with the X/YTICKS keywords which does the job but makes the resulting axis spacings linear! MAN!

I was referring to David's "if we'd use that lowest common denominator"

:-) I myself have no complains, by the way.

Cheers,

Pavel

P.S. I'll have to unexpectedly drop by the Coyote's construction site with my G4 to get things straight, if not with IDL and Macs, at least with the carpentry and those beers in the fridge, anyway :-)

Bring your paint brush. :-)

Cheers,

David

P.S. Let's just say I don't mean the one in MacPaint.
