Subject: idl5.4.1
Posted by R.Bauer on Fri, 23 Mar 2001 12:18:46 GMT

Hi,

the patch idl5.4.1 for unix will solve the license problem of getting in trouble
by starting idl twice or more on one unix machine.

Did someone know what else is fixed.

I was surprised myself thats device,decomposed=0 is now the default setting.

What is file_info?

I found nothing about this routine.

Unfortunately one of our routines has the same name and it is not
compatibel.
