Subject: how do I keep IDL quiet? Posted by Jason Li on Tue, 27 Mar 2001 17:13:51 GMT

Hi,

I have an IDL routine "myMain" that calls upon many subroutine. Each time I run myMain, it reports "compiled module ..." message for each subroutine it has successfully compiled.

I am now running myMain repeatedly from an UNIX script and don't wish to see these messages. How do I make IDL quiet?

thanks

Try

.compile myMain resolve_routine,/all save,file='myMain.sav',/routines

.run myMain

or better

idl -rt=myMain.sav

regards

You can also set !quiet=1 in your startup script.

                                   Alexander Pope.
```

Or quit using .rnew to recompile when changes are made....?
