I had just a little bit of trouble getting this to work.
First of all, I had an older version of MGS_Container
on my path, that I had to get rid of. Then, I found
a typo on line 850 of HBB_TwoLists__Define.pro:

```
S_label = Self.LabelsNames[1]
```

Should be:

```
S_label = Self.LabelNames[1]
```

Now it works, but the two lists have taken over my computer!
You must have some BIG default lists. :-)

Cheers,

David

Hi,

Thanks for the correction. What a great debut (thud!)

> Now it works, but the two lists have taken over my computer!
> You must have some BIG default lists. :-)

Oh geez! That was a fix I added at the last minute, nuts! I explicitly
set the size of the second list from the geometry of the first, as

```
FirstList = Widget_List(BlahBlahBlah)
Geo = Widget_info(FirstList, /Geometry)
SecondList = Widget_LIST(blahblahblah, $
  xSize = Geo.Scr_xSize, ySize = Geo.Scr_ySize) <---- Bad Idea
```

This step was an attempt to endrun around a sizing difference between Mac and Unix widget sizing. Endrun! Hmph, I ran right off the field!

The updated code follows. On this Mac the two lists occupy the same screen space. I would be interested in knowing if that is not true on other platforms.

Thanks again,

Ben

P.S. I am reading 'Arctic Dreams' by Barry Lopez... Wow!

```
;-----STARTHERE
;+
; NAME:
; HBB_TwoList
;
; PURPOSE:
; The purpose of this widget/object to provide the user an interactive
means of
; of adjusting the contents of a list. Items from a 'primary' list may
be copied to a
;'secondary' list. Items in the secondary list may be removed or 'moved
up' or
;'moved down' relative to each other.
;
; REQUIREMENTS:
; INHERITS MGS_GUIObject
;
; CATEGORY:
; Widgets.
;
; CALLING SEQUENCE:
; objref = OBJ_NEW('HBB_TwoList')
;
; ARGUMENTS:
; None required
;
; INITIALIZATION KEYWORDS: (see MGS_GUIObject)
; P_LIST (Get/Set) An vector of values for the primary list.
; The datatype is maintained as provided, but the List_Widget
; requires that the values be string. So most numeric types
```

```

; are acceptable when converted to STRING. The items in the
; the secondary list are selected from this list. If not provided,
; a dummy list (list of dummies?) is provided automatically.
; S_LIST (Get/Set) A vector of items for the secondary list. Default = []
; P_LABEL (Get/Set) A label for the primary list. Default = "
; S_LABEL (Get/Set) A label for the secondary list. Default = "
; MAX_LENGTH (Get/Set) The maximum number of rows shown in the list,
Default = 30
; MIN_LENGTH (Get/Set) The minimum number of rows shown in the list ,
Default = 10
; UPDOWN (Get/Set) Set this keyword to permit up/down shuffling of items
in
; the secondary list using the MoveUp/MoveDown buttons.
; MULTIPLE (Get/Set) Set this keyword to permit multiple-item selection
; in either list.
; NO_DUPLICATES (Get/Set) Set this keyword to prevent duplicate
; items from the primary list from appearing in the secondary list.
;
;
; EXAMPLE:
; o = Obj_New('HBB_TWOLIST',/UPDOWN)
; o->GUI
; ;fiddle with the lists... over items left/right/up/down.
; ;close the dialog
; o->GUI
; ;note your earlier choices are preserved
; Obj_Destroy, o
; ;cleanup
;
; MODIFICATION HISTORY:
; written 3 APR 2001 Ben Tupper
; Bigelow Laboratory for Ocean Science
; btupper@bigelow.org
; Based upon PRC_DualList widget.
;
; 4 APR 2001 Fixed bug when moving the top item DOWN. BT
; Changed the keyword SHUFFLE to UPDOWN for clarity.
; 9 APR 2001 Changed 'Add' to 'Copy' and placed UpDown buttons under the
; secondary list. Forced buttons to same size. BT
;
;
