
Subject: IDLgrWindow, Map_Patch, and contours

Hey all,

have a couple of questions. First, after I re-map an image with Map_Patch, I tried to contour the image, and the contour lines were all over the place (I believe due to some sort of triangulation routine Map_Patch runs). Is there a way to contour the data after I remap it with Map_Patch, or am I out of luck?

Secondly, I tried to view the same image in an IDLgrWindow in an attempt to move towards Object Orientated Graphics. However, the image did not plot out correctly, with a smattering of mis-placed pixels along the top of the graphics window. Does Map_Patch work with IDLgrWindow routines? Thanks in advance!
