Hi,

A few years ago, I posted a request asking for some code to perform wavenumber-frequency decomposition of a time series of data. Someone by the name of William Connelly responded to me and provided me with the code and also pointed me to his useful website on the topic. A disk crash last year wiped out my bookmarks, and I can no longer find this website. I want to refer someone else to the site, and was wondering if anyone (perhaps even William himself) can help me out. I believe he worked at Cambridge and was studying the paths of southern hemisphere ice sheets once they break off of the ice shelf.

Thanks in advance for any help you can offer.  
Charlotte
