The IDL 5.4 reference manual indicates that saving/restoring data should be backward compatible. It says "Note also that save files containing routines may not be compatible between different versions of IDL, but that files containing data are always backwards-compatible." It is my intent not to store any information other than the variable of interest, which does happen to be a structure.

I have tried using the "/VARIABLES" keyword to the SAVE command as well, but this does not seem to help. Any assistance would be appreciated.

Thanks,
Chris
