Hi,

I believe there were some changes to the END statement done.

idl < input > text.out

where input is a shell script like

```
.run test
test
```

and test is a script like

```
pro test
    for i=0, 1800 do print,i
    print,'hallo'
end
```

In prior versions like idl 5.3 all printed text was saved to text.out.

Now there are a lot of text is missing.

If you change the 1800 to 300 the text.out file is empty.

If we set a flush before the end (flush,-1) we got all print statements into the file.

I believe in idl5.3 there was a flush implemented to the end statement.
