Subject: Thickening the x-axis

---

I've been having problems (using PV-Wave 4.01 on a Sun SPARC) getting the x-axis plotted with a thicker line and thicker tick marks. I'm using the PLOT and AXIS routines and have tried setting !p.thick and using the keyword THICK in the routine calls. These only affect the lines plotted between data points as far as I can see.

Does anyone have any suggestions?

Thanks,

Matthew.
