http://groups.google.com/groups?as\_q=plot&as\_ugroup=comp.lang.idl-pvwave

Ahh... Thanks for pointing this out.. Gave me a chance to go back to the "really old days", and I found an old "IDL wish list" I wrote in 1995 (along the lines of the "top ten wishes for IDL in the next release"):

- 1. Pointers that work like \*real\* pointers (Check!)
- 2. A coherent way of deciding the result dimensions in indexed operations (nope!)
- 3. Possibility of Macros (nope!)
- 4. Possibility of having widget applications + command line available at the same time (like the help facility) (check - well, almost, they don't work without retalls)
- 5. Different brackets for array subscripts and function calls (check!)
- 6. A portable pseudo-language to produce true \*compiled\* subroutines (nope)

So, 2 1/2 out of 6 isn't that bad.. David, do you do recycling?

I have a related question. For the past few months I have been hosting a (partial) archive of the newsgroup on my web pages. Now that Google is back on line with archives, much of the reason for my own archive have evaporated. On the balance, Google is more complete and easier to use. Also my archive won't continue to scale up into the future.

Question: are there any objections to my taking down the page? Or, some way to make it "better" than Google in some way? [I almost prefer to take down the page vs. mothballing it. Right now I get a lot of pretty superfluous Google hits.]

### Craig

Archive is here:

http://cow.physics.wisc.edu/~craigm/idl/newsgroup.html

I would say (Check!). If you are using idlde you can use idl macros.
I have some written e.g. export_html,%s,name=%_'%s%_'

Dear Craig,

I do not very often search by the google search or your archive. I normally

spent a few minutes per day reading this newsgroup articles and sometimes

I am able to help someone. The most interesting things I have stored to a local mail folder. The oldest one is from David Fanning followed by Phil Williams in 1996. In the past and till now I have stored these mails myself because I am not sure if deja or google will stay alive all the time I plan working with idl.

Someone else who is not regulary reading this famous newsgroup or an idl beginners needs each help he or she can get. If someone has a problem

he or she can search a big library of questions and answers and I believe

a lot of people are interested in reading archives.

As David did preparing requests into tips is very useful for all of us. This is the right way to organize an archive but it takes a lot of time. And this is the answer of your question too.

I will not demand that's you have to organize your archive in this way

until I am myself are able to do the same.

read something about linux / windows

http://www.suse.de/de/news/hotnews/MS.html

### Craig,

either way you decide, i wanted to just let you know your archive really saved me during the time between google buying deja and taking down the archives to when they put the archives back up again. i was really glad that you had an independent archive that we could access. thanks!

best, -Johnny

My favorite is my Ctrl-Shift-X, to execute a selected line of code:

ignoredResult = Execute("%s")

I know, IDLWAVE-Shell users have had this and much more for years! Recall that I'm the one \*still\* trying to get a command-line IDL for Windows so I can use IDLWAVE-Shell... %^\

Cheers,
