
Subject: Correct format of "included" files (using "at" sign)

I'm trying to use the "at" sign (the \$%^&*! 'xrn' editor won't let me type it!) to substitute some code into IDL. The procedure is tersely described on p. 2-7 of the User's Guide for v3.1. I'm getting a problem that I think has to do with the format of the code I'm including. It is an IF_THEN_ELSE block with no header line (like PRO ... or FUNCTION ...) and no trailer lines (like RETURN, END, EXIT). If I run the routine that invokes the code substitution, I get syntax errors in the first lines following the invocation. If I add a line saying 'END' to the substituted code, I get dropped back to the IDL> prompt at the end of the substituted code.

Can anyone tell me what I should be doing differently? I've read the manual and the FAQ, but no luck. If anyone can help me with this, we should put the disseminated knowledge into the FAQ.

Thanks to all. Perhaps a posted response is appropriate, since the question may be of general interest.

Dave
