Hi Everyone,

A few weeks (months?) ago I posted a question about warping the continents to a magnetic grid. I have done that, and am making the IDL map data files available to you all, along with a modified map_continents.pro (it accepts a /cmagnetic keyword now).

You can find the data, procedures, and two images of the output here:
<http://lasp.colorado.edu/snoedata/magnetic/>

-k.

p.s. I would like to thank Brian Jackel for the code base, and Andrew Cool for the idea of using the IDL map data files.
