hi there,

i am new in idl-programming and i have the following question/problem:

the widget i try to program has to open a menu so one can choose a file to work with; this is done with `DIALOG_PICKFILE(/READ)`

the source-code is below

however i am receiving this error-message:

> Expression must be a structure in this context: EVENT.

> % Execution halted at: RMT_WIDGET_EVENT 13 rmt_widget_event.pro

> % \$MAIN\$

and i don't know what is wrong...

any suggestions?

thanx,

ralf

source:

PRO rmt_widget_event, event

WIDGET_CONTROL, GET_UVALUE = rmt_uval, event.id

CASE rmt_uval OF

"help" : labeling, 'sorry, not installed'

"menuebar" : CASE event.value OF

"File.Path" : path

"File.Exit" : WIDGET_CONTROL, event.top, /DESTROY

ENDCASE

ENDCASE

END
